

CommPro – All-In-One Business Servers

Straight out of the box multifunction file and communications server

We are proud to introduce their range of managed servers, although mainly aimed at the SME market they are suitable for businesses of all sizes.

Straight out of the box you have a multifunction file and communications server designed to manage your businesses internet, mail, file sharing, firewalling, remote access and communications. Built on quality hardware with a tried and tested operating system, you have a robust, reliable and cost-effective multi-function network appliance that can manage all your company communication requirements in a controlled manner. It's called an all-in-one managed server because all of the functions are available in a single, integrated unit which is fully installed, configured and supported by us.

Built in email server that is compatible with all major email client software such as Microsoft Outlook, Mozilla Thunderbird and Microsoft Outlook Express. It also provides support for either POP3 or IMAP protocols.

Built in Shorewall firewall designed to protect your businesses corporate data and systems from hackers, and has easy, effective administrator control.

OpenVPN allows multiple remote sites to connect to each other using low-cost cable technology like.

ADSL. With OpenVPN it is possible for all your employees to connect to the office from anywhere in the world provided they have their laptop and an internet connection.

Built proxy server to help speed up internet access for all users. It works by caching already visited web pages on the server, so subsequent access to that page by other users is downloaded from the server rather than having to download from the hosting web server. The proxy server also allows the system administrator to allow or deny access to certain sites or users.

System Administration – managed via a simple web based interface. The web based administration is designed to be intuitive, ensuring that the functions you require are where you expect to find them.

It's provided as a managed server solution, which includes installation and ongoing support.
